- Why are research skills important?
- Research opportunities
- Infrastructure for research

ASA Guidelines for Undergraduate Programs in Statistics (2014)

- Graduates should be expected to write clearly, speak fluently, and construct effective visual displays and compelling written summaries
- They should demonstrate ability to collaborate in teams and to organize and manage projects
- They should be able to communicate complex statistical methods in basic terms to managers and other audiences and visualize results in an accessible manner
- There is pedagogical value in having students practice communication to identify gaps in their understanding.
- Communication skills need to dovetail with students' technical and statistical knowledge: excellent communication of inappropriate or incorrect analyses is counterproductive.

Why are research skills important?

Collaborative Assignments and Projects Collaborative learning combines two key goals: learning to work and solve problems in the company of others, and sharpening ones own understanding by listening seriously to the insights of others, especially those with different backgrounds and life experiences. Approaches range from study groups within a course, to team-based assignments and writing, to cooperative projects and research.

Undergraduate Research Many colleges and universities are now providing research experiences for students in all disciplines. Undergraduate research, however, has been most prominently used in science disciplines. With strong support from the National Science Foundation and the research community, scientists are reshaping their courses to connect key concepts and questions with students early and active involvement in systematic investigation and research.

Why are research skills important?

AAC&U High impact practices
(<https://www.aacu.org/leap/hips>)

Undergraduate Research (cont.) The goal is to involve students with actively contested questions, empirical observation, cutting-edge technologies, and the sense of excitement that comes from working to answer important questions.

What Is ASA
Datafest?

Hosting an Official
ASA DataFest

What Is ASA DataFest?

The American Statistical Association (ASA) DataFest is a competition where undergraduate students work around the clock to analyze a real-world data set.

DataFest was founded at UCLA in 2011. Each year, students from across the country gather for 48 intense hours to analyze a data set. The 2014 DataFest was held at the University of California, Los Angeles (UCLA) and was the first time that the competition was held outside of the United States.

Real-world tools, engaged students

GitHub Education helps students, teachers, and schools access the tools and events they need to shape the next generation of software development.

GitHub Classroom

The power of the Git and GitHub workflow, scaled for the needs of students.

GitHub Education Community

Where veteran teachers share tips, tricks, and scripts.

🕒 **63** commits 🌿 **1** branch 🏷️ **0** releases

Table of Contents

Introduction	1
Chapter 1: R Markdown Basics	3
1.1 Lists	3
1.2 Line breaks	4
1.3 R chunks	4
1.4 Inline code	4
1.5 Including plots	5
1.6 Loading and exploring data	5
1.7 Additional resources	8
Chapter 2: Mathematics and Science	9
2.1 Math	9
2.2 Chemistry 101: Symbols	9
2.2.1 Typesetting reactions	10
2.2.2 Other examples of reactions	10
2.3 Physics	10
2.4 Biology	10

How to Sustain?

- Faculty development (eCOTS, USCOTS, CAUSE, JSM, DataCamp, webinars)
- Regional affiliations (for joint undergraduate conferences)
- Local acknowledgemnt (value of creating these opportunities for students)
- More support for REU's to address dramatic growth in undergraduate statistics and data science majors
